

IT SYSTEMS IMPLEMENTER

IT big thinkers wanted! Ready to take the next step in your career and implement server and VOIP projects. Ready to be challenged each day to help improve client's use of IT?

Hiring Standard

The number one key to DenaliTEK's success is to exceed client expectations through superior project process deployment. DenaliTEK prides itself on excellent client service and will win or lose depending on the success oriented project processes provided by its employees. An employee with DenaliTEK must remember that no level of technical excellence will make up for poor, ineffective project results. Effective client project scope delivery skills are a primary job requirement for employment at DenaliTEK.

Job Summary

The role of Advance Services System Implementer is responsible for developing a high quality, "first time right" project result. New and existing Client stakeholders, third party vendors and DenaliTEK internal personnel are all key partners. The goal is a timely implementation of the defined operational and technical techniques leading to the new technology deployment.

Duties and Responsibilities

The primary duties of a System Implementer are:

- Implement the designed information technology solution to address operational efficiency, data storage and protection, energy efficiency, security, and financial investment payback and returns. Incorporation of industry standard best practices and system efficiency required.
- Support the deployment plan which addresses stakeholder time driven operational requirements and integrates third party vendors and internal staff.
- Deliver high quality control standards with a first time right attitude while representing Customer's needs and perspective. Implementation decisions based on formal project management documentation required.

The primary responsibilities of a System Implementer are:

- Learn key vendors products to seek current proven and tested solutions which match DenaliTEK degree of risk management and clients' information technology purpose alignment.
- Provide proactive communications which drive project implementation milestones. We require effective communication and interaction with our team and clients.

- Execute the job using highly defined work processes designed to reduce risk and improve DenaliTEK internal efficiencies. Appropriate risk escalation judgment required.
- Review and test the results of the project based on predefined quality standards and stated methods.

Qualification and Expectations

The following qualifications are required for this job position:

- Good understand of implementing complex systems and networking
- Solid results focused background
- DNS, DHCP, Firewall and VPN technology experience required.
- Past experience in implementing and maintaining corporate workstations, servers and network infrastructure. i.e. technical knowledge in Microsoft Small Business Server 2003/2008, Windows Server 2003/2008, Exchange Solutions and Cisco products required.
- VOIP telephony experience considered beneficial.
- Network security understanding a plus.
- Personal career development interest and technology change enthusiasm required.
- Solid verbal and written communication skills
- Strong analytic and problem solving skills preferably involving computer or telephony industries
- Associates, Bachelors, or Master degrees in relevant area recognized
- Occasional evening/weekend work essential. Ability to lift 50 lbs. required.

Success Definitions

Communications: Proactive, customer service focused attitudes will improve successful implementation and evaluation. Support and implement system requirement specifications, Site Survey and Analysis documents, Statement of Work and Project Design Plan, Scope change orders and Project Recap documents including technical, project management and client focused recommendations.

Accountability: Project management focused efforts to successfully execute the project charter and identify and proactive design risk reducing solutions. Communication of opportunities for additional client work to appropriate team members is very important.

Deliverables and Timeliness: Projects delivered on time, within pre-established budgetary windows and matching client approved work scope.
